

ABSTRACT OF THE DISCLOSURE

A system for facilitating processing of data to and from the data bus of the mobile terminal. The system includes a mobile terminal comprising a data bus for receiving and transmitting data to a wireless communication network. The system further includes an output device for presenting at least one of audio, video, and textual information to a user, and an
5 interface module connected to the data bus of the mobile terminal. The interface module includes: (a) a protocol stack for processing data to and from the data bus of the mobile terminal in accordance with at least one communication protocol, (2) a user agent for interpreting data to and from the protocol stack; and (3) a signal generator for converting the interpreted data from the user agent into signals for presentation by the output device.
